## Food Chains & Food Webs

A **food chain** is a model that shows how **energy is passed** from one organism to another.

A **food web** is an interconnected series of different **food chains** that describes the **feeding relationships** between species within an **ecosystem**.

**Energy** enters an ecosystem as **sunlight** and is turned into food by **plants**. The energy is transferred to organisms that eat **producers** and transferred again when organisms eat **consumers**.

Name \_\_\_\_\_ Class \_\_\_\_\_ Date \_\_\_\_\_

Animals eat different things in different ecosystems. Match these **consumers** with food. They may eat more than one item.
