

INTERPRETING INFORMATION

What is Interpreting Information?

You can use maps, charts, and timelines to interpret information.

On Maps:

A map is a drawing created to represent the world or a part of the world's surface.

A map has many different tools to help us interpret all of the information on the map.

Symbols are used to represent the features shown on maps.

On Charts
Charts
They re

Example:

According to this pie chart, we can see that Paul received 35% of the votes.

On Timelines:

A timeline is used to show events in the order that they occurred, which means a timeline is always in chronological order.

Example:

Peyton had to make a timeline of his life so far for a school project. He made sure he included his birthday, the date of his first day of school, the date he learned to ride a bicycle, and the date he won his first trophy.
