

SYMMETRY

Symmetry is an exact matching of two parts along a fold line.

How to find symmetry:

- A shape that can be folded to make equal parts is a symmetrical figure.
- Symmetrical patterns are the same size and shape on both sides.
- You can find a line of symmetry where the object can be folded to get equal parts.

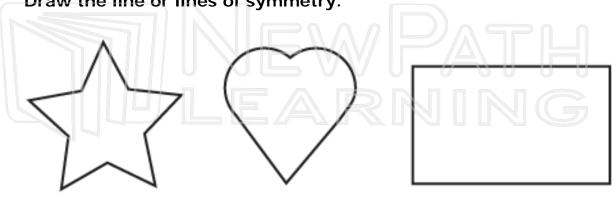

You can make a symmetrical figure.

- 1. Fold a piece of paper in half.
- 2. Cut a design on the fold.
- 3. Open the paper.
- 4. The resulting design is symmetrical. Both sides are the same size and shape.

Try This!

Draw the line or lines of symmetry.
