## How to Divide:

There are five steps to dividing.

1. Divide.
2. Multiply.
3. Subtract.
4. Compare.
5. Bring down the next number.

## Example:

14
$6 \mid 84$
-6
1.

2.
3. $\mathbf{S}$
4. C
must be less than the divisor, if not, then go back to step 1 and choose a larger number to multiply.
5. Bring down the 4. Then go through steps 1 through 4 again. $\quad 24 \div 6=4$.
6. Multiply. Subtract. Compare. There is not another number to bring down.
7. The final answer is $\mathbf{1 4} .84 \div \mathbf{6}=\mathbf{1 4}$.
