

EARTH'S WEATHER

What is Weather?

Weather is what it feels like outside right now: hot, cold, windy, wet, freezing....

The Sun is the source of energy that creates all kinds of weather.

Weather changes all the time! It might be hot and sunny in the morning but cooler and rainy in the afternoon.

Temperature is how cold or hot something is.

What are Some kinds of Bad Weather?

A **thunderstorm** is a storm that brings rain, lightning, and thunder.

Sleet is freezing rain. It starts out as rain in the sky, but starts to freeze as it falls. When it gets to the ground, it is almost frozen.

Snow is water that freezes high in the air and falls as snowflakes.

A **blizzard** is a lot of snow that falls in a short amount of time.

A hurr

rain.
