

Name _____ Class _____ Date _____

Match each of the following terms to its definition:

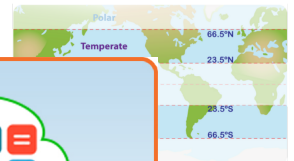

- Temperate zone
- Tropical savannah
- Tundra
- Tropical rain forest
- Tropical zone
- Temperate grassland
- Biome
- Tropical desert

1. _____ - a biome with very fertile soil that has moderate precipitation and temperatures

Precipitation - low to moderate
 Temperature - moderate
 Soil - nutrient rich

2. _____ - the climate zones between 23.5 degrees and 66.5 degrees latitude north and south

3. _____ precipitation

on - low
 re - high
 ent poor

4. _____ character

on - high
 re - high
 ent poor

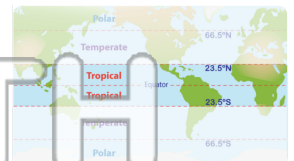

5. _____ by tall gr

moderate
 high
 poor

6. _____ - the climate zones between the equator and 23.5 degrees latitude north and south

7. _____ - a biome found in the polar zone, characterized by very cold temperatures and animals such as caribou and polar bears

Precipitation - low
 Temperature - very low
 Soil - mostly frozen

8. _____ - a large geographic region that is characterized by a particular climate and the plants and animals that live in that region

Name _____ Class _____ Date _____

Match each of the following terms to its definition:

Temperate zone

Tropical savannah

Tundra

Tropical rain forest

Tropical zone

Temperate grassland

Biome

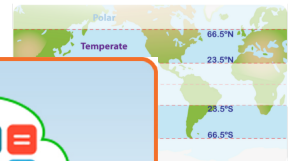

Tropical desert

1. **temperate grassland** - a biome with very fertile soil that has moderate precipitation and temperatures

Precipitation - low to moderate
Temperature - moderate
Soil - nutrient rich

2. **temperate zone** - the climate zones between 23.5 degrees and 66.5 degrees latitude north and south

3. **tropical zone** - the climate zones between the equator and 23.5 degrees latitude north and south

Precipitation - low to moderate
Temperature - high
Soil - nutrient poor

4. **tropical zone** - the climate zones between the equator and 23.5 degrees latitude north and south

Precipitation - low to moderate
Temperature - high
Soil - nutrient poor

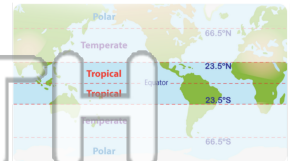

5. **tropical zone** - the climate zones between the equator and 23.5 degrees latitude north and south

Precipitation - moderate to high
Temperature - high
Soil - nutrient poor

6. **tropical zone** - the climate zones between the equator and 23.5 degrees latitude north and south

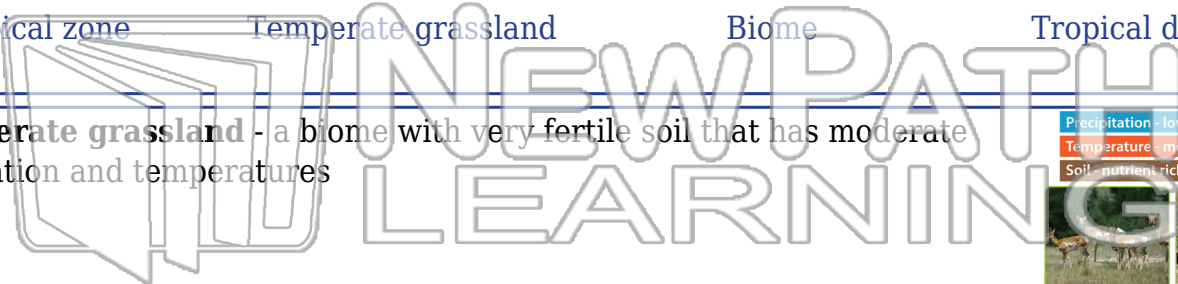

7. **tundra** - a biome found in the polar zone, characterized by very cold temperatures and animals such as caribou and polar bears

Precipitation - low
Temperature - very low
Soil - mostly frozen

8. **biome** - a large geographic region that is characterized by a particular climate and the plants and animals that live in that region
