

Name _____ Class _____ Date _____

Match each of the following terms to its definition:

Lava

Mafic

Nonfoliated metamorphic rock

Regional metamorphism

Igneous rock

Rock cycle

Metamorphic rock

Organic sedimentary

1. _____ - rocks that are formed underground when melted rock, called magma, deep below the Earth's surface, becomes trapped in small areas underground; they are formed above ground when lava erupts from a volcano and then cools

2. _____ - liquid (molten) rock that is extruded through the surface of the Earth's crust; melted rock that comes above the Earth's surface

3. _____ igneous r

4. _____ pressure the extre together

5. _____ arranger

6. _____ - sedimentary rock formed by the accumulation of shell material on the ocean floor

7. _____ - metamorphism of a rock caused by intense pressure such as mountain formation

8. _____ - the interconnection of geologic processes by which one rock type is turned into another rock type

Name _____ Class _____ Date _____

Match each of the following terms to its definition:

- | | | | |
|--------------|------------|------------------------------|-----------------------|
| Lava | Mafic | Nonfoliated metamorphic rock | Regional metamorphism |
| Igneous rock | Rock cycle | Metamorphic rock | Organic sedimentary |

1. **igneous rock** - rocks that are formed underground when melted rock, called magma, deep below the Earth's surface, becomes trapped in small areas underground; they are formed above ground when lava erupts from a volcano and then cools

2. **lava** - liquid (molten) rock that is extruded through the surface of the Earth's crust; melted rock that comes above the Earth's surface

3. **mafic rocks**

4. **metamorphic rocks** - rocks that have been changed by heat and pressure deep in the Earth's crust

5. **nonfoliated metamorphic rocks** - metamorphic rocks that do not have a layered appearance
