

Name _____ Class _____ Date _____

Match each of the following terms to its definition:

Alcoholic fermentation

Seed

Energy

Oxygen

Carbon dioxide

Photosynthesis

Chlorophyll

Stem

1. _____ - a structure containing the embryo of a plant enclosed in a protective covering called the seed coat

2. _____ - the part of the plant that supports the plant, allows plant to reach above soil to take in sunshine, and carries water and nutrients from the roots

3. _____ move

4. _____ atmosphere give off

5. _____ bacteria, simple st

Chlorophyll

Stem

1. seed - a structure containing the embryo of a plant enclosed in a protective covering called the seed coat

2. stem - the part of the plant that supports the plant, allows plant to reach above soil to take in sunshine, and carries water and nutrients from the roots to the rest of the plant

3. energy

4. oxygen - a colorless, odorless gas that is essential for most life forms; it is given off by plants during photosynthesis

5. photosynthesis - a process by which plants use sunlight, water, and carbon dioxide to produce oxygen and energy in the form of sugar
